Versteel will replace or repair (at our discretion) without cost to our customers any item manufactured by Versteel found to be defective as a result of defective material or workmanship and is still owned by the original purchaser. We will not, however, repair any item which is not properly installed, abused or subject to any use other than that which was originally intended. Care of Laminate Surfaces, T-Mold, Bumper, PVC Edges and Urethane
Clean with a mild soap solution and rinse with clean, clear water. Wipe the entire surface, moving with the pattern and follow with a clean, dry soft cloth. When a wood edge exists, follow instructions found under "Care of Wood Edges and Veneer Surfaces" for edge.

Care of Wood Edges and Veneer Surfaces
Clean all surfaces frequently with water-dampened soft cloth, moving the cloth with the grain direction. Quickly buff dry. Immediately remove any liquids that come in contact with wood surfaces using a blotting action to absorb liquid. Lift objects to move them. Never pull them across the finished surface.

For an additional safeguard, use a protective surface pad. Doing so could ensure a lasting finish by protecting your furniture from possible damage caused by pens and sharp objects.

Avoid exposing furniture to extreme heat and cold or to wide humidity variances. Avoid exposing furniture to strong sunlight. Do not use soaps, commercial cleaners or harsh solvents (nail polish remover, acetates, etc.) as they will cause finish deterioration. If using a protective glass top, place spacer pads under the glass top to allow the wood to breathe.

Care of Corian® Surfaces
Clean regularly with a cloth or sponge wrung out in warm soapy water. You can also use ammonia-based cleaners or commercial cleaners recommended for use on Corian® surfaces. Wipe up any water spills immediately so as not to leave a film that makes the finish look blotchy.

Care of Powder Coat and Nickel Surfaces
Clean with a mild soap solution and rinse with clean, clear water. Wipe the entire surface and follow with a clean, dry cloth to buff dry.

Care of Chrome Bases
Clean with a wet cloth or window cleaner. For scuff marks or heavy soiling, a non-abrasive automotive chrome polish can be applied as directed.

Maintenance of Mechanical Parts
Clean any lint or debris from the moving parts of the E-Z install tilt or folding base mechanisms. Do not apply lubricant. Mechanisms have been designed and tested to not require lubrication under normal conditions.

Care of Upholstered Tack Panels
For Versteel standard fabrics and vinyls, consult the back of the appropriate swatch card for cleaning codes and any specific instructions. For COM materials, consult with the individual textile manufacturer for cleaning codes and any specific instructions pertaining to your particular fabric.

The Interplay Rover™ Pup is 26 ¾" from the floor to the surface for use as a pull-up typing surface or can roll under most surfaces to store out of the way.

Suggested typing height table is 26 ¾"
Suggested wheelchair height table is 32"
Suggested counter height table is 36"
Suggested stand up height table is 42"

TIM Base Construction

TIM table bases are constructed of 14 gauge round tube upper legs with 16 gauge round tube telescoping height adjustment lower leg sections. Guide bushings inside the legs are molded from nylon bushing materials to provide smooth, quiet operation of the height adjustment feature. The height adjustment button is made of solid steel with a spring actuated movement. A Height Adjustment Lock Out Kit is available if you wish to lock out the push-button height adjustment feature.

FIXED BASES

Fixed bases feature a ¼" thick mounting top plate and are field installed into pre-drilled holes with hardware provided. TIM tables with fixed bases include the push-button height adjustment feature.

NOTE *FIXED BASES ARE SHIPPED SEPARATE FROM THE TOP AND ONLY REQUIRE SCREW ATTACHMENT TO ASSEMBLE*

TILT-NEST-FOLD BASES

Tilt feature is cable actuated with the pull of a release handle located under the table top on the end of the surface. The cable operates two brake control mechanisms mounted on each end of the table to support the top. Nest-fold features are constructed of die cast metal components and 14 gauge round tube, fully enclosed in reinforced plastic housings for smooth, quiet operation.

NOTE *THE TABLE IS SHIPPED FACTORY ASSEMBLED FOR IMMEDIATE USE AFTER UNCARTONING*

Reference Table Heights

TIM tables are constructed with push-button height adjustment to provide five inches of vertical movement. The top leg hole position will set the surface height at 27" with the third from the top hole for 29" standard seated task, and the bottom round hole providing the 32" surface height required for wheelchair applications. The adjustment holes are at 1" spacing increments.

Manufacturer certifies that products conform to UL Std 962 and are certified to Canadian standard CSA.T.I.L No. A-30.

Manufacturer certifies that products meet or exceed applicable ANSI/BIFMA standards and testing.

Form Metal Modesty, General Construction
The modesty panel is constructed with an aluminum extruded back panel and a perforated hinged steel door. There are three (3) separate unobstructed channels that allow the routing of power and data cables, with a wire exit on the back for the top and middle channel. The Form Modesty panel is 10" high and extends the length of the top on Brattice, Performance and Vela. The Form Modesty panel is located along the front edge of the table for maximum leg and knee clearance. Accessory end cap trim kit available.

NOTE *RADIUS CORNERS ARE NOT RECOMMENDED ON THE TABLE TOP WHEN A FORM MODESTY IS SPECIFIED*

Fixed Form Modesty (FixFormMod XF or XFS)
The Fixed Form Modesty panel is mounted to the top with screws through steel brackets. The fixed modesty panel must be field installed into pre-drilled positions in the top. All mounting hardware is packed with the modesty panel. Extruded back panel is black with powder coat options for the perforated steel door. Powder coat finish on perforated door matches the base finish unless specified differently. Transparent powder coat finishes are not available.

NOTE *RADIUS CORNERS ARE NOT RECOMMENDED ON THE TABLE TOP WHEN A FORM MODESTY IS SPECIFIED*
NOTE *XFS INDICATES SQUARE MODESTY CONSTRUCTION WITH SQUARE HOLES*

Folding Form Modesty (FoldFormMod FF)
The Folding Form Modesty panel is mounted to the top with heavy duty steel hinge assemblies. A sliding brace supports the modesty panel in the set-up position and also holds the modesty panel in place in the stored position. Extruded back panel is black with powder coat options for the perforated steel door. Powder coat finish on perforated door matches the base finish unless specified differently. Transparent powder coat finishes are not available.

NOTE *RADIUS CORNERS ARE NOT RECOMMENDED ON THE TABLE TOP WHEN A FORM MODESTY IS SPECIFIED*

Fixed Lightweight Form Modesty (FixLightweightFormMod XL or XLS)

The Fixed Lightweight Form Modesty panel is a lightweight version of the Versteel Form Modesty. It is a formed steel perforated panel that is mounted to the top with screws through steel brackets. It must be field installed into pre-drilled positions in the top. A deep channel in the back of the panel allows for the routing of power and data cables inside of the modesty. Mounting hardware is packed with the modesty panel. Powder coat finish on the perforated panel matches the base finish unless specified differently. Transparent powder coat finishes are not available.

NOTE *RADIUS CORNERS ARE NOT RECOMMENDED ON THE TABLE TOP WHEN A FORM MODESTY IS SPECIFIED*

NOTE *XLS INDICATES STRAIGHT MODESTY CONSTRUCTION W/SQUARE HOLES*

Hanging Modesty (HangMod HM)

The hanging modesty is mounted to the top with a metal hinge that is factory installed. This mechanism pivots if the table is tilted to allow for a 90 degree slim-tilt. Finish details match the top unless specified differently.

Removable Lightweight Form Modesty (RemLightweightFormMod RL or RLS)

The Removable Lightweight Form Modesty panel slides into heavy duty steel brackets that are mounted to the top. Simply tighten the handwheels to secure the modesty in position, or loosen them to remove the panel. Powder coat finish on the perforated panel matches the base finish unless specified differently. Transparent powder coat finishes are not available.

NOTE *RADIUS CORNERS ARE NOT RECOMMENDED ON THE TABLE TOP WHEN A FORM MODESTY IS SPECIFIED*

NOTE *RLS INDICATES SQUARE MODESTY CONSTRUCTION WITH SQUARE HOLES*

Panel Modesty (MPL and MPV)

The Panel Modesty is constructed of ⅛" hardboard core with laminate or veneer face and back surfaces, machined with exposed edges. Panel Modesty can be specified on both fixed and tilt-nest-fold base tables and will swing out to nest on the table. The 8 ½" high Panel Modesty is field mounted with hook brackets, installed with handwheels under the table top. Threaded inserts are installed in the top when Panel Modesty is specified with the table. Panel Modesty shapes complement the rectangle and arc rectangle top shapes. Finish details match the top unless specified differently.

Sail Modesty (MS__)

The Sail Modesty panel is constructed of Lycra® fabric hooked into slotted holes on the table legs then stretched and hooked over pegs on the under surface of the table top. Sail Modesty panels can be specified on both fixed and tilt-nest-fold base tables and can be stored on table when tilted, nested or folded on table transport. All TIM tables are pre-drilled for the field installation of the Sail Modesty. Top pegs are installed when Sail Modesty is specified with the table. Sail Modesty is available in coordinating colors of Alabaster, Alloy, Ebony and Frost.

Fixed Configuration Conference Tops

Conference tops may use fixed configurations to achieve larger than normal sizing and seating accommodations, but there are some specific items that must be considered. These large conference tops are generally greater than 60" wide and 240" long.

By contacting Versteel with your vision we can help you engineer and produce your table. Below is a list of important points we will address.

MATERIAL YIELD

Most laminate is available in a maximum sheet size of 60" x 144". Versteel can design shapes and linking configurations that will maximize material yield.

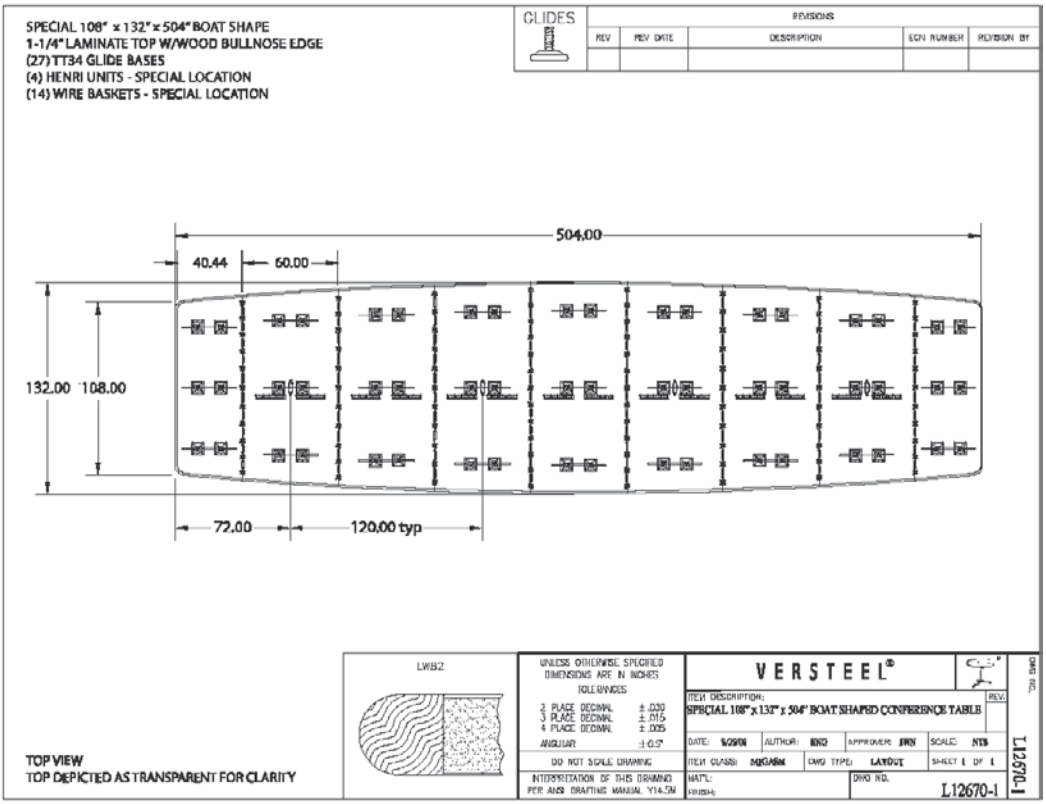

LAMINATE PATTERNS

Versteel can minimize seam lines by designing and positioning the linking configuration to take full advantage of your laminate pattern.

BASES AND JOINTS

Larger sections can be produced to limit the number of bases and joints required.

At right is a typical Versteel drawing of a large, fixed configuration conference table. The extremely large size (504" x 132") required nine (9) sections and twenty-seven (27) bases. Power and data options have been incorporated into the drawing.

Configuration Guidelines

Often we receive requests to assemble room configurations that one would assume are very easy. But without the proper input, it is not so simple. Below are some common questions that will help to define your needs as well as enable us to help you specify your tables.

The following are general guidelines only. Always refer to local codes for restrictions and requirements.

Define Your Space

Start by asking yourself what you really want to accomplish in your room.

How will your room be used? Will you need breakout groups, is it a classroom with rows, or a boardroom? Do you need a T-shape, U-shape, or hollow square table group? Are there any special modifications that are specific to your application?

Besides the size of your room, here are some other items that you should take into consideration:

- ¬ instructor or speaker area
- ¬ wall with boards and/or audiovisual equipment
- ¬ door and window locations
- ¬ anything else which may interfere (columns, steps, ramps, HVAC, etc,)

Define Your Needs

Your table considerations should begin by thinking about the need for the following items:

- ¬ modesty panels
- ¬ linking
- ¬ power and data
- ¬ wire management and grommets
- ¬ keyboard trays
- ¬ fixed, folding or tilt bases
- ¬ special needs (alternate or adjustable height)

Your seating considerations should begin by thinking about the need for the following items:

- ¬ assume a 30" width per person
- ¬ mobility (casters)
- ¬ stacking or storage issues
- ¬ usage and wear (upholstery or wood)
- ¬ adjustable height
- ¬ function (task specific or multiple)

Common Room Layout Guidelines

By using the guidelines below and the information that you supply (from answering the previous questions), Versteel can help you specify the tables and seating you need to make your space function at its maximum potential.

Between Rows Allow Four Feet (4')

If rows are used, four feet (4') between rows is considered adequate in order to provide space for movement.

Instructor Allowance of Eight - Ten Feet (8'-10')

A minimum of eight to ten feet (8' -10') should be allowed for the instructor's space, from the wall to the approach side of the first table row.

Back Wall Allowance of Seven Feet (7')

Space consideration for the back wall is necessary. A minimum of seven feet (7') from the back wall to the user's side of the last table is suggested.

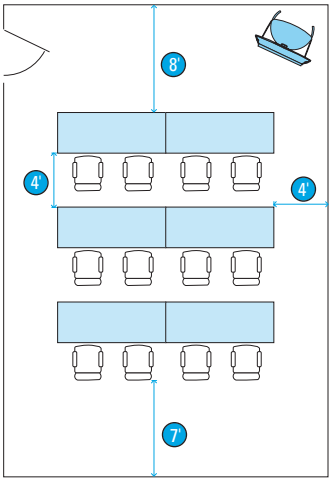

Side Wall Allowance of Four Feet (4')

A minimum of four feet (4') from a side wall to the edge of a table should be incorporated into your configuration. Increase the distance for larger rooms.

Aisle Allowance of Four Feet (4')

If an aisle is needed, allow a minimum of four feet (4'). This dimension should increase with your room size.

The drawing below illustrates the guidelines above.

The following are general guidelines only. Always refer to local codes for restrictions and requirements.

Reference information here originally appeared in Architectural Graphic Standards, published by John Wiley and Sons; and in US Government publications for compliance with the ADA (Americans with Disabilities Act).

Also, be sure to check US Government publications for compliance with the ADA (Americans with Disabilities Act).

Common Seating Dimension Requirements

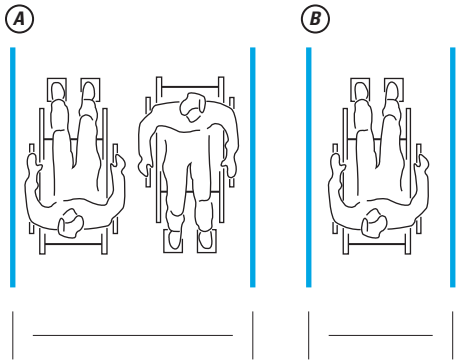

General spacing of thirty inches (30") of lateral space per chair at a table is standard. A minimum of twenty-four inches (24") may work, but will depend upon your chair style and table dimensions. Allow a minimum of thirty to thirty-six inches (30"-36") for wheelchair space at a table.

Most wheelchairs are designed to fit beneath a standard table with a twenty-nine inch (29") table top height. However, some wheelchairs require tables with tops at thirty-two inches (32") in height. Allow an additional twelve to eighteen inches (12"-18") in aisles where wheelchairs may be situated back to back.

A rule of thumb for cafeteria style seating is to allow a minimum of twelve square feet (12 ft^2) for each seat.

Since every space has its own unique size and function, it is important that you consider the aforementioned guidelines when planning your space. Be sure to allow adequate space for aisles and plan your rooms around walls and other permanent fixtures such as doors or windows. Anticipate the type of activity that will be going on and plan enough space at the table for easy movement of personnel when seated.

Don't forget to consider power and data needs also. For help planning and selecting the power and data options that are right for your space, *see pages 56-71.*

Studio Steel®

Versteel's "urban fabrication" process leaves the telltale signs of welding and assembly on the surface, highlighting a manufacturing aesthetic. Choosing a clear or transparent powder coat is recommended, allowing tonal striations (created as a result of extreme heat), natural textures, and the inherent qualities of raw steel to show through.

Studio Steel Process. $133

Powder Coat Finishes

All powder coat finishes in the Versteel offering have been formulated with the use of epoxy, polyester or epoxy and polyester blends to maximize the finish durability.

Essential Information

Like space planning with room configurations, we often receive requests to create power and data needs that one would assume are very easy. Below are some common questions that will help to define your needs and in turn will enable us to help you specify your tables.

Which Solution Best Fits Your Needs

Ask yourself some basic questions to help define your specific needs.

Is storage an issue? Some tables may be folded or tilted with certain power and data sources in position, while others may require that the power and data source be removed for these functions. Make sure you consider the space that you will need to store all the parts of your configurations.

Will you be moving your tables? If your tables are going to be utilized in varied locations, you will want to ensure that you can easily disconnect and reconnect your power and data. Table Link - Ends Only is included with Henri and Powerlink electrical package options to prevent the accidental disconnection of power supply to adjacent tables.

How will your tables be used? Power and data choice may depend upon whether your tables will be task-specific or multipurpose. A single use may have different requirements than a multi-use configuration. Remember to consider the need for wire management and modesty panels also.

Will your needs be changing? You don't always know what your specific needs will be in the future, but you may want the ability to add power and data at a later date.

Where is the power and data source for the room? Before any power and data is specified for a table, it is important to know where the power will be coming from in your room. If you are plugging into existing outlets then the power feed for the table must be within six feet (6') of the outlet.

Have you calculated the power load? Power loads are measured in amps (abbreviated form of amperes). Your circuits will only handle so many amps so you need to know what you can safely plug in without causing an overload situation. Use the worksheet on the next page for a general idea.

Selecting Your Power and Data Options

Select the best power and data option based on your particular need and application.

Alternate Power & Data Units

Alternate UL listed power and data units from other companies can be installed in Versteel tables. To ensure a proper fit in the top, supplier name, exact model number and cut-out template information must be provided with purchase order. When using power and data units from alternate sources, the table will not be UL listed.

The following are general guidelines only. Always refer to local codes for restrictions and requirements.

Amp Load Worksheet

Use this worksheet to get an approximate value of the amps you will be using. If there is any risk that the circuits may not be able to carry the load, contact a qualified electrician. Also, always consult any local codes or restrictions concerning power.

Wiring of voice and data jacks is the sole responsibility of the customer

Technical Specifications

Henri provides pop-up power and voice and data access. A built-in opening is provided for cables to be routed below the surface while up. Henri for linked table groups are powered from a single 9' cord, 15 amp standard grounded outlet plug with a circuit breaker and power surge protector. Voice and data plates can be ordered with one (1) high speed voice CAT3 and one (1) data CAT6 hardwire jacks as standard. LED light indicates when power is on. Optional data plates can be specified to accommodate other voice and data suppliers, contact Versteel Customer Service for details prior to order placement.

UL Listing requires the limitation of eight (8) Henri units (two plugs per Henri) on a single plug power entry.

Based on the National Electrical Code, it is not recommended to exceed a 12 amp equipment load per power infeed. See chart with amp load worksheet on page 57.

Each Henri is shipped installed in the table top and includes all necessary cables and cord mounting clips in order to complete the electrical installation. Henri is not retrofittable. However, if a brush grommet has been previously installed in your table, then it is possible to insert a Henri at a future date.

Henri Planning and Locations

CONSIDER

How many Henri units in each table?

Where are the power and data sources in the room?

Are the tables within a six foot (6') radius of the power sources?

What are the expected table configurations of the room?

Provide a sketch of your table configuration indicating the power/data sources in the room and Versteel Customer Service will verify or help you specify the power/data solution that will best suit your needs.

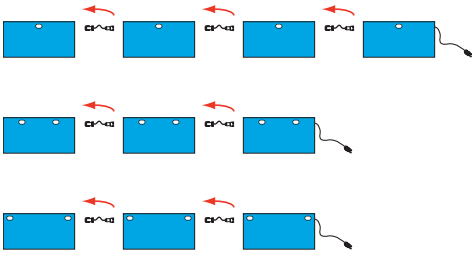

Common table configurations with standard power and data locations may be found in the electrical planning section on pages 56-71.

Custom Location Print

Below are three easy steps for supplying a print that places Power & Data units in a custom location.

Step 1

Indicate where you want your Power & Data units located in the top. Use center lines for marking positions. Versteel will review your location requests to make sure that they do not interfere with base locations and their attachment.

Step 2

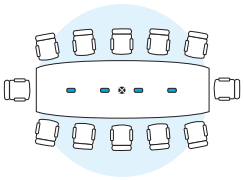

Indicate the face of all Power & Data units to determine which way the power outlets, voice jacks and data jacks will be accessed.

Step 3

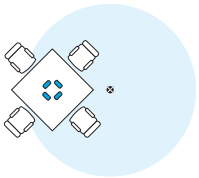

Indicate where the Power & Data sources are located within the space. The orientation of the table(s) within the space will also help to determine the best possible access point.

It's that simple. Call Versteel Customer Service if you have any questions regarding Power & Data Custom Locations.

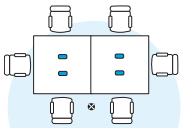

Boatshape conference table with four units. Power is located in the center of the table and the units alternate sides facing the users.

Square table with four units. Power is located to the side of the table and the units each face a user.

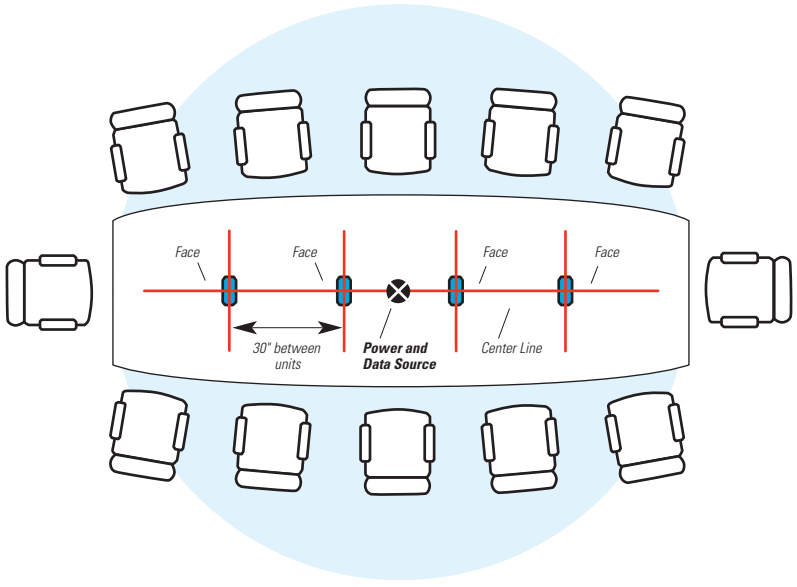

Two (2) square tables linked with two (2) units each. Power is located to the side of the table and the units face outwards.

Single Circuit Powerlink Technical Specifications

Powerlink provides horizontal power, voice and data access as well as cable management.

Powerlink Single Circuit system allows several tables to be powered from a single 15 amp standard grounded outlet plug which will power up to eight (8) duplex outlets per sequence. Circuit breakers and power surge protectors for single or sequenced Powerlinks are at the infeed.

UL Listing requires the limitation of eight (8) Powerlink 42" and 48" length (two plugs per Powerlink) or four (4) Powerlink 60", 72", 84" and 96" length (4 plugs per Powerlink) on a single plug power entry.

Single Circuit and Powerlink Technical Specifications

Voice and data plates are installed in the Powerlink cover with one (1) high speed voice CAT3 and one (1) data CAT6 hardwire jacks as standard. Data plates can be specified to accommodate other voice and data suppliers, contact Versteel Customer Service for details prior to order placement.

Mounting lever locks are factory installed in the bottom front edge of the table. Powerlink installs without the use of tools, in the above table top facing user, below table top facing out or below table top facing user positions.

Each Powerlink unit includes all necessary hardwire connection or flex conduit jumpers, covers and hardware to complete the electrical installation.

Powerlink may be retrofitted to Versteel Class E tables only. Check your Versteel table product label located on the underside of the table top to determine if your table is Class E.

Based on the National Electrical Code, it is not recommended to exceed a 12 amp equipment load per power infeed. See amp load worksheet on page 57.

CONSIDER

Where are the power and data sources located in the room?

What are the expected table configurations of the room?

Provide a sketch of your table configuration indicating the power/data sources in the room and Versteel Customer Service will help you specify the power/data solution that will best suit your needs.

Common table configurations with standard power and data locations may be found in the electrical planning section on pages 56-71. Powerlink will always be top mounted facing user unless specified differently.

Powerlink Single Circuit with power infeed. Face drops to allow easy access to wire management channels and linking connections.

Powerlink with sequencing connection mounted above table top, facing user.

Powerlink mounted below table top, facing out.

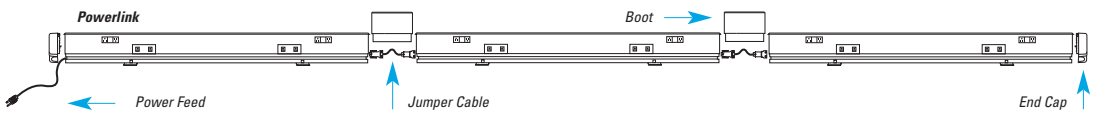

Powerlink with sequencing connection mounted below table top, facing user.

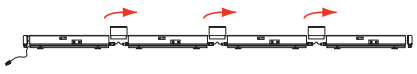

Powerlink can be repositioned in any of the above positions by using the Powerlink lever lock. No tools are required

Connecting Data/Voice Systems To Your Network Grid

Multiple options are available when specifying data/voice connections for power/data systems in Versteel tables. The appropriate option is dependent upon your specific application.

UNWIRED CONNECTIONS

Unwired data/voice connections need to be wired by the customer's IT department, or an outside IT provider. Unwired connections are "standard" for the following products:

- Henri/Henri Now
- Powerlink
- Power Bay
- Powered Form Modesty

(Unwired connections are optional for all other power/data systems offered by Versteel.)

PREWIRED CONNECTIONS

Prewired data/voice connections terminate with a "male" patch cable connector on the end. This enables the unit to be plugged directly into a data wall plate. A 10' cable is standard for data connections, and a 7' cable is standard for voice connections. Prewired connections are "standard" for the following products:

- Axil Z
- Ellora
- Mho
- Node

DATA COUPLERS

Installed directly in the power/data unit, couplers are "female" jacks that allow units to be connected to a data wall plate with a standard data patch cable (with "male" jacks on each end). This is a convenient option for tables that will be moved frequently.

Data Couplers are available on all power/data units, excluding Henri and Henri Now *(Henri Quick Connect provides the same functionality as a data coupler for Henri and Henri Now).*

Care of Laminate Surfaces with PVC edge
Clean with a mild soap solution and rinse with clean, clear water. Wipe the entire surface, moving with the pattern and follow with a clean, dry soft cloth. When a wood edge exists, follow instructions found under "Care of Wood Edges and Veneer Surfaces" for edge.

Care of Wood Edges and Veneer Surfaces
Clean all surfaces frequently with water-dampened soft cloth, moving the cloth with the grain direction. Quickly buff dry. Immediately remove any liquids that come in contact with wood surfaces using a blotting action to absorb liquid. Lift objects to move them. Never pull them across the finished surface.

For an additional safeguard, use a protective surface pad. Doing so could ensure a lasting finish by protecting your furniture from possible damage caused by pens and sharp objects.

Avoid exposing furniture to extreme heat and cold or to wide humidity variances. Avoid exposing furniture to strong sunlight. Do not use soaps, commercial cleaners or harsh solvents (nail polish remover, acetates, etc.) as they will cause finish deterioration. If using a protective glass top, place spacer pads under the glass top to allow the wood to breathe.

Care of Corian® Surfaces
Clean regularly with a cloth or sponge wrung out in warm soapy water. You can also use ammonia-based cleaners or commercial cleaners recommended for use on Corian® surfaces. Wipe up any water spills immediately so as not to leave a film that makes the finish look blotchy.

Care of Powder Coat and Nickel Surfaces
Clean with a mild soap solution and rinse with clean, clear water. Wipe the entire surface and follow with a clean, dry cloth to buff dry.

Care of Chrome Bases
Clean with a wet cloth or window cleaner. For scuff marks or heavy soiling, a non-abrasive automotive chrome polish can be applied as directed.

Care of Laminate Surfaces, T-Mold, Bumper, PVC Edges and Urethane
Clean with a mild soap solution and rinse with clean, clear water. Wipe the entire surface, moving with the pattern and follow with a clean, dry soft cloth. When a wood edge exists, follow instructions found under "Care of Wood Edges and Veneer Surfaces" for edge.

Care of Wood Edges and Veneer Surfaces
Clean all surfaces frequently with water-dampened soft cloth, moving the cloth with the grain direction. Quickly buff dry. Immediately remove any liquids that come in contact with wood surfaces using a blotting action to absorb liquid. Lift objects to move them. Never pull them across the finished surface.

For an additional safeguard, use a protective surface pad. Doing so could ensure a lasting finish by protecting your furniture from possible damage caused by pens and sharp objects.

Avoid exposing furniture to extreme heat and cold or to wide humidity variances. Avoid exposing furniture to strong sunlight. Do not use soaps, commercial cleaners or harsh solvents (nail polish remover, acetates, etc.) as they will cause finish deterioration. If using a protective glass top, place spacer pads under the glass top to allow the wood to breathe.

Care of Powder Coat and Nickel Surfaces
Clean with a mild soap solution and rinse with clean, clear water. Wipe the entire surface and follow with a clean, dry cloth to buff dry.

Care of Chrome Bases
Clean with a wet cloth or window cleaner. For scuff marks or heavy soiling, a non-abrasive automotive chrome polish can be applied as directed.

Maintenance of Mechanical Parts
Clean any lint or debris from the moving parts of the E-Z install tilt or folding base mechanisms. Do not apply lubricant. Mechanisms have been designed and tested to not require lubrication under normal conditions.

Care of Upholstered Tack Panels
For Versteel standard fabrics and vinyls, consult the back of the appropriate swatch card for cleaning codes and any specific instructions. For COM materials, consult with the individual textile manufacturer for cleaning codes and any specific instructions pertaining to your particular fabric.

Laminate and Veneer, Standard Core Construction
The standard top construction consists of 45-50 lb. particleboard, surfaced with a high pressure laminate or veneer face. A backer sheet is laminated to the under side of the top. Tops are shipped pre-drilled for field installation of bases and accessories.

Laminate, Lightweight Core Construction - 1 ¼"
Lightweight core is a multi-ply birch plywood, with a density of around 28 lbs. per cubic ft., offering a 30%–35% weight reduction for a typical table vs. standard core. The tops are surfaced with a high pressure laminate face. A backer sheet is laminated to the under side of the top, and tops are shipped pre-drilled for field installation of bases and accessories. Lightweight core is only available on 1 ¼" thick tops.

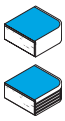

The lightweight plywood construction allows for mounting of bases or other accessories at any location under the top.

Lightweight core is available as an option for tops that are no larger than 48" x 96".

Configuration Guidelines
Often we receive requests to assemble room configurations that one would assume are very easy. But without the proper input, it is not so simple. Below are some common questions that will help to define your needs as well as enable us to help you specify your tables.

Define Your Space
Start by asking yourself what you really want to accomplish in your room.

How will your room be used? Will you need breakout groups, is it a classroom with rows, or a boardroom? Do you need a T-shape, U-shape, or hollow square table group? Are there any special modifications that are specific to your application?

Besides the size of your room, here are some other items that you should take into consideration:

- ¬ instructor or speaker area
- ¬ wall with boards and/or audiovisual equipment
- ¬ door and window locations
- ¬ anything else which may interfere (columns, steps, ramps, HVAC, etc,)

Define Your Needs
Your table considerations should begin by thinking about the need for the following items:

- ¬ modesty panels
- ¬ linking
- ¬ power and data
- ¬ wire management and grommets
- ¬ keyboard trays
- ¬ fixed, folding or tilt bases
- ¬ special needs (alternate or adjustable height)

Your seating considerations should begin by thinking about the need for the following items:

- ¬ assume a 30" width per person
- ¬ mobility (casters)
- ¬ stacking or storage issues
- ¬ usage and wear (upholstery or wood)
- ¬ adjustable height
- ¬ function (task specific or multiple)

The following are general guidelines only. Always refer to local codes for restrictions and requirements.

Common Room Layout Guidelines
By using the guidelines below and the information that you supply (from answering the previous questions), Versteel can help you specify the tables and seating you need to make your space function at its maximum potential.

Between Rows Allow Four Feet (4')
If rows are used, four feet (4') between rows is considered adequate in order to provide space for movement.

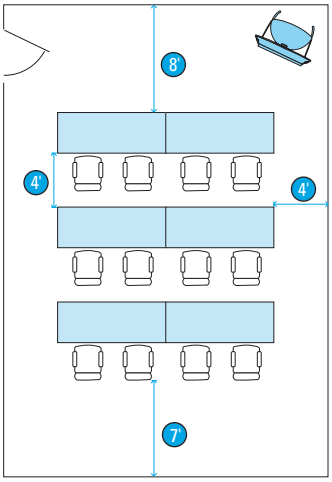

Instructor Allowance of Eight - Ten Feet (8'-10')
A minimum of eight to ten feet (8' -10') should be allowed for the instructor's space, from the wall to the approach side of the first table row.

Back Wall Allowance of Seven Feet (7')
Space consideration for the back wall is necessary. A minimum of seven feet (7') from the back wall to the user's side of the last table is suggested.

Side Wall Allowance of Four Feet (4')
A minimum of four feet (4') from a side wall to the edge of a table should be incorporated into your configuration. Increase the distance for larger rooms.

Aisle Allowance of Four Feet (4')
If an aisle is needed, allow a minimum of four feet (4'). This dimension should increase with your room size.

The drawing below illustrates the guidelines above.

The following are general guidelines only. Always refer to local codes for restrictions and requirements.

Reference information here originally appeared in Architectural Graphic Standards, published by John Wiley and Sons; and in US Government publications for compliance with the ADA (Americans with Disabilities Act).

Also, be sure to check US Government publications for compliance with the ADA (Americans with Disabilities Act).

Common Seating Dimension Requirements

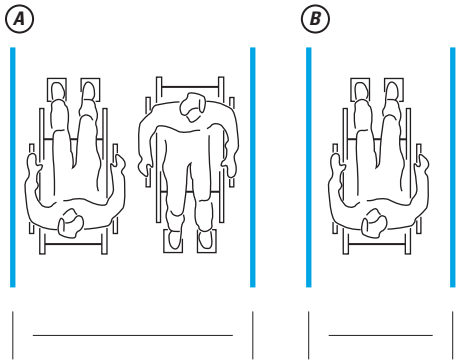

General spacing of thirty inches (30") of lateral space per chair at a table is standard. A minimum of twenty-four inches (24") may work, but will depend upon your chair style and table dimensions. Allow a minimum of thirty to thirty-six inches (30"-36") for wheelchair space at a table.

Most wheelchairs are designed to fit beneath a standard table with a twenty-nine inch (29") table top height. However, some wheelchairs require tables with tops at thirty-two inches (32") in height. Allow an additional twelve to eighteen inches (12"-18") in aisles where wheelchairs may be situated back to back.

A rule of thumb for cafeteria style seating is to allow a minimum of twelve square feet (12 ft^2) for each seat.

D *3' minimum*

If using square tables and seating, there should be a minimum of sixty-six inches (66") between tables. This allows for a thirty inch (30") aisle and two (2) chairs. Diagonal seating requires a thirty-six inch (36") minimum between table corners.

Since every space has its own unique size and function, it is important that you consider the aforementioned guidelines when planning your space. Be sure to allow adequate space for aisles and plan your rooms around walls and other permanent fixtures such as doors or windows. Anticipate the type of activity that will be going on and plan enough space at the table for easy movement of personnel when seated.

Don't forget to consider power and data needs. For help planning and selecting the power and data options that are right for your space, see the Power & Data Price List.

Studio Steel®

Versteel's "urban fabrication" process leaves the telltale signs of welding and assembly on the surface, highlighting a manufacturing aesthetic. Choosing a clear or transparent powder coat is recommended, allowing tonal striations (created as a result of extreme heat), natural textures, and the inherent qualities of raw steel to show through.

All table and seating products manufactured by Versteel are guaranteed by a Lifetime Warranty against defects in materials and workmanship from the date of purchase. Products manufactured/adapted for use in a Pavilion or Pop-Up setting are covered under a three (3) year warranty against defects in materials and workmanship from date of purchase.

Electrical items not manufactured by Versteel are covered by the manufacturers under their specified warranty.

Wood veneer is warranted for a period of ten (10) years. Natural variations in grain, color or texture of wood should not be construed as defects under this warranty.

Versteel will replace or repair (at our discretion) without cost to our customers any item manufactured by Versteel found to be defective as a result of defective material or workmanship and is still owned by the original purchaser. We will not, however, repair any item which is not properly installed, abused or subject to any use other than that which was originally intended. Care of Laminate Surfaces, T-Mold, Bumper, PVC Edges and Urethane
Clean with a mild soap solution and rinse with clean, clear water. Wipe the entire surface, moving with the pattern and follow with a clean, dry soft cloth. When a wood edge exists, follow instructions found under "Care of Wood Edges and Veneer Surfaces" for edge.

Care of Wood Edges and Veneer Surfaces
Clean all surfaces frequently with water-dampened soft cloth, moving the cloth with the grain direction. Quickly buff dry. Immediately remove any liquids that come in contact with wood surfaces using a blotting action to absorb liquid. Lift objects to move them. Never pull them across the finished surface.

For an additional safeguard, use a protective surface pad. Doing so could ensure a lasting finish by protecting your furniture from possible damage caused by pens and sharp objects.

Avoid exposing furniture to extreme heat and cold or to wide humidity variances. Avoid exposing furniture to strong sunlight. Do not use soaps, commercial cleaners or harsh solvents (nail polish remover, acetates, etc.) as they will cause finish deterioration. If using a protective glass top, place spacer pads under the glass top to allow the wood to breathe.

Care of Powder Coat and Nickel Surfaces
Clean with a mild soap solution and rinse with clean, clear water. Wipe the entire surface and follow with a clean, dry cloth to buff dry.

Care of Chrome Bases
Clean with a wet cloth or window cleaner. For scuff marks or heavy soiling, a non-abrasive automotive chrome polish can be applied as directed.

Maintenance of Mechanical Parts
Clean any lint or debris from the moving parts of the E-Z install tilt or folding base mechanisms. Do not apply lubricant. Mechanisms have been designed and tested to not require lubrication under normal conditions.

Care of Upholstered Tack Panels
For Versteel standard fabrics and vinyls, consult the back of the appropriate swatch card for cleaning codes and any specific instructions. For COM materials, consult with the individual textile manufacturer for cleaning codes and any specific instructions pertaining to your particular fabric.

Configuration Guidelines
Often we receive requests to assemble room configurations that one would assume are very easy. But without the proper input, it is not so simple. Below are some common questions that will help to define your needs as well as enable us to help you specify your tables.

Define Your Space
Start by asking yourself what you really want to accomplish in your room.

How will your room be used? Will you need breakout groups, is it a classroom with rows, or a boardroom? Do you need a T-shape, U-shape, or hollow square table group? Are there any special modifications that are specific to your application?

Besides the size of your room, here are some other items that you should take into consideration:

- ¬ instructor or speaker area
- ¬ wall with boards and/or audiovisual equipment
- ¬ door and window locations
- ¬ anything else which may interfere (columns, steps, ramps, HVAC, etc,)

Define Your Needs
Your table considerations should begin by thinking about the need for the following items:

- ¬ modesty panels
- ¬ linking
- ¬ power and data
- ¬ wire management and grommets
- ¬ keyboard trays
- ¬ fixed, folding or tilt bases
- ¬ special needs (alternate or adjustable height)

Your seating considerations should begin by thinking about the need for the following items:

- ¬ assume a 30" width per person
- ¬ mobility (casters)
- ¬ stacking or storage issues
- ¬ usage and wear (upholstery or wood)
- ¬ adjustable height
- ¬ function (task specific or multiple)

The following are general guidelines only. Always refer to local codes for restrictions and requirements.

Common Room Layout Guidelines
By using the guidelines below and the information that you supply (from answering the previous questions), Versteel can help you specify the tables and seating you need to make your space function at its maximum potential.

Between Rows Allow Four Feet (4')
If rows are used, four feet (4') between rows is considered adequate in order to provide space for movement.

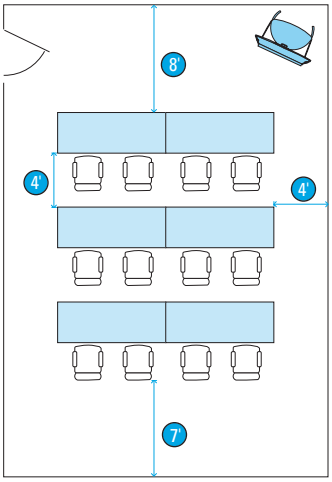

Instructor Allowance of Eight - Ten Feet (8'-10')
A minimum of eight to ten feet (8' -10') should be allowed for the instructor's space, from the wall to the approach side of the first table row.

Back Wall Allowance of Seven Feet (7')
Space consideration for the back wall is necessary. A minimum of seven feet (7') from the back wall to the user's side of the last table is suggested.

Side Wall Allowance of Four Feet (4')
A minimum of four feet (4') from a side wall to the edge of a table should be incorporated into your configuration. Increase the distance for larger rooms.

Aisle Allowance of Four Feet (4')
If an aisle is needed, allow a minimum of four feet (4'). This dimension should increase with your room size.

The drawing below illustrates the guidelines above.

The following are general guidelines only. Always refer to local codes for restrictions and requirements.

Reference information here originally appeared in Architectural Graphic Standards, published by John Wiley and Sons; and in US Government publications for compliance with the ADA (Americans with Disabilities Act).

Common Seating Dimension Requirements

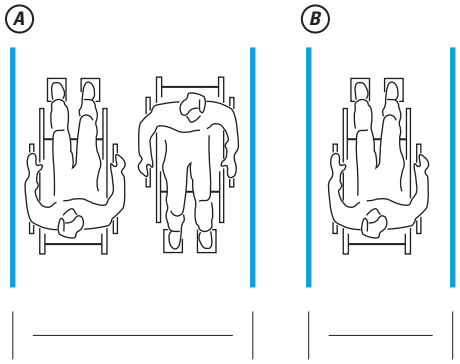

General spacing of thirty inches (30") of lateral space per chair at a table is standard. A minimum of twenty-four inches (24") may work, but will depend upon your chair style and table dimensions. Allow a minimum of thirty to thirty-six inches (30"-36") for wheelchair space at a table.

Most wheelchairs are designed to fit beneath a standard table with a twenty-nine inch (29") table top height. However, some wheelchairs require tables with tops at thirty-two inches (32") in height. Allow an additional twelve to eighteen inches (12"-18") in aisles where wheelchairs may be situated back to back.

A rule of thumb for cafeteria style seating is to allow a minimum of twelve square feet (12 ft^2) for each seat.

A *6" minimum (with no passage)*
B *2' 6" to 3' minimum (for passage)*
C *1' 6" minimum (for limited passage)*
D *3' minimum*

If using square tables and seating, there should be a minimum of sixty-six inches (66") between tables. This allows for a thirty inch (30") aisle and two (2) chairs. Diagonal seating requires a thirty-six inch (36") minimum between table corners.

Since every space has its own unique size and function, it is important that you consider the aforementioned guidelines when planning your space. Be sure to allow adequate space for aisles and plan your rooms around walls and other permanent fixtures such as doors or windows. Anticipate the type of activity that will be going on and plan enough space at the table for easy movement of personnel when seated.

Care of Laminate Surfaces with PVC edge
Clean with a mild soap solution and rinse with clean, clear water. Wipe the entire surface, moving with the pattern and follow with a clean, dry soft cloth. When a wood edge exists, follow instructions found under "Care of Wood Edges and Veneer Surfaces" for edge.

Care of Wood Edges and Veneer Surfaces
Clean all surfaces frequently with water-dampened soft cloth, moving the cloth with the grain direction. Quickly buff dry. Immediately remove any liquids that come in contact with wood surfaces using a blotting action to absorb liquid. Lift objects to move them. Never pull them across the finished surface.

For an additional safeguard, use a protective surface pad. Doing so could ensure a lasting finish by protecting your furniture from possible damage caused by pens and sharp objects.

Avoid exposing furniture to extreme heat and cold or to wide humidity variances. Avoid exposing furniture to strong sunlight. Do not use soaps, commercial cleaners or harsh solvents (nail polish remover, acetates, etc.) as they will cause finish deterioration. If using a protective glass top, place spacer pads under the glass top to allow the wood to breathe.

Care of Powder Coat
Clean with a mild soap solution and rinse with clean, clear water. Wipe the entire surface and follow with a clean, dry cloth to buff dry.

Maintenance of Mechanical Parts
Clean any lint or debris from the moving parts of the tilt base mechanism. Do not apply lubricant. Mechanisms have been designed and tested to not require lubrication under normal conditions.

Base Styles
The Sky Adjustable Height Table is available in five base styles to coordinate with the following table series: Brattice, Eliga, Performance, Skware, and Vela. The rectangle tables offer T or cantilever bases. Columns are round on all base styles.

Sky bases are intended to coordinate with fixed height tables in other series. Bottom rails will match fixed-height tables; however, the column may differ to accommodate the adjustable height mechanism.

Base Materials
The base is available in Versteel's standard powder coat offering or Studio Steel®. Tables are not available in Chrome or Nickel.

Casters
Tables are standard with two locking casters on the user side and two non-locking casters on the approach side. Optional glides are available at no upcharge.

Dual Wheel, black 2" diameter casters are standard on Brattice, Eliga, Performance, and Skware base styles. The Vela base includes the series-specific, unique Vela-profile 3" diameter casters. Each caster is fitted to a reinforced caster receiver.

Tops
All tops are 1 1/4" thick and are offered with fixed or slim-tilt bases. Tables must be in lowest position to tilt.

Adjustable Height
Sky Adjustable Height tables offer infinite adjustability - from sit to stand or anywhere in between. Tables with casters (standard) have a 29" to 42" height range and those with glides have a 27" to 40" height range. All Sky tables are ADA compliant.

Operational Standards
These patented height assist tables are manufactured using pneumatic cylinders. Sky is designed to function with a maximum weight capacity of an additional 20 lbs. The greater the weight placed on the table top, the greater effort will be required to operate the pneumatic assist. This inverse applies when lowering the table. If the table is intended to hold more than an additional 20 lbs, please contact Versteel Customer Service.

Wire Management
The slim-tilt tables include two clear plastic wire managers which are formed to create a J channel. In addition to housing wires, these channels also act as a bumper between nested tables to prevent table top damage.

BIFMA INTERNATIONAL

Manufacturer certifies that products meet or exceed applicable ANSI/BIFMA standards and testing.

Studio Steel®

Versteel's "urban fabrication" process leaves the telltale signs of welding and assembly on the surface, highlighting a manufacturing aesthetic. Choosing a clear or transparent powder coat is recommended, allowing tonal striations (created as a result of extreme heat), natural textures, and the inherent qualities of raw steel to show through.

Care of Laminate Surfaces with PVC edge
Clean with a mild soap solution and rinse with clean, clear water. Wipe the entire surface, moving with the pattern and follow with a clean, dry soft cloth. When a wood edge exists, follow instructions found under "Care of Wood Edges and Veneer Surfaces" for edge.

Care of Wood Edges and Veneer Surfaces
Clean all surfaces frequently with water-dampened soft cloth, moving the cloth with the grain direction. Quickly buff dry. Immediately remove any liquids that come in contact with wood surfaces using a blotting action to absorb liquid. Lift objects to move them. Never pull them across the finished surface.

For an additional safeguard, use a protective surface pad. Doing so could ensure a lasting finish by protecting your furniture from possible damage caused by pens and sharp objects.

Avoid exposing furniture to extreme heat and cold or to wide humidity variances. Avoid exposing furniture to strong sunlight. Do not use soaps, commercial cleaners or harsh solvents (nail polish remover, acetates, etc.) as they will cause finish deterioration. If using a protective glass top, place spacer pads under the glass top to allow the wood to breathe.

Care of Corian® Surfaces
Clean regularly with a cloth or sponge wrung out in warm soapy water. You can also use ammonia-based cleaners or commercial cleaners recommended for use on Corian® surfaces. Wipe up any water spills immediately so as not to leave a film that makes the finish look blotchy.

Care of Powder Coat and Nickel Surfaces
Clean with a mild soap solution and rinse with clean, clear water. Wipe the entire surface and follow with a clean, dry cloth to buff dry.

Care of Chrome Bases
Clean with a wet cloth or window cleaner. For scuff marks or heavy soiling, a non-abrasive automotive hrome polish can be applied as directed.

Care of Butcher Block Tops

Clean all surfaces frequently with water-dampened soft cloth, moving the cloth with the grain direction. Quickly buff dry. Immediately remove any liquids that come in contact with wood surfaces using a blotting action to absorb liquid. Lift objects to move them. Never pull them across the finished surface.

Avoid exposing furniture to extreme heat and cold or to wide humidity variances. Avoid exposing furniture to strong sunlight. Do not use soaps, commercial cleaners or harsh solvents (nail polish remover, acetates, etc.) as they will cause finish deterioration.

Care of Powder Coat

Clean with a mild soap solution and rinse with clean, clear water. Wipe the entire surface and follow with a clean, dry cloth to buff dry.

Care of Laminate Surfaces, T-Mold, Bumper, PVC Edges and Urethane

Clean with a mild soap solution and rinse with clean, clear water. Wipe the entire surface, moving with the pattern and follow with a clean, dry soft cloth. When a wood edge exists, follow instructions found under "Care of Wood Edges and Veneer Surfaces" for edge.

Care of Wood Edges and Veneer Surfaces

Clean all surfaces frequently with water-dampened soft cloth, moving the cloth with the grain direction. Quickly buff dry. Immediately remove any liquids that come in contact with wood surfaces using a blotting action to absorb liquid. Lift objects to move them. Never pull them across the finished surface.

For an additional safeguard, use a protective surface pad. Doing so could ensure a lasting finish by protecting your furniture from possible damage caused by pens and sharp objects.

Avoid exposing furniture to extreme heat and cold or to wide humidity variances. Avoid exposing furniture to strong sunlight. Do not use soaps, commercial cleaners or harsh solvents (nail polish remover, acetates, etc.) as they will cause finish deterioration. If using a protective glass top, place spacer pads under the glass top to allow the wood to breathe.

Care of Powder Coat and Nickel Surfaces

Clean with a mild soap solution and rinse with clean, clear water. Wipe the entire surface and follow with a clean, dry cloth to buff dry.

Care of Chrome Bases

Clean with a wet cloth or window cleaner. For scuff marks or heavy soiling, a non-abrasive automotive chrome polish can be applied as directed.

Maintenance of Mechanical Parts

Clean any lint or debris from the moving parts of the E-Z install tilt or folding base mechanisms. Do not apply lubricant. Mechanisms have been designed and tested to not require lubrication under normal conditions.

Configuration Guidelines

Often we receive requests to assemble room configurations that one would assume are very easy. But without the proper input, it is not so simple. Below are some common questions that will help to define your needs as well as enable us to help you specify your tables.

The following are general guidelines only. Always refer to local codes for restrictions and requirements.

Define Your Space

Start by asking yourself what you really want to accomplish in your room.

How will your room be used? Will you need breakout groups, is it a classroom with rows, or a boardroom? Do you need a T-shape, U-shape, or hollow square table group? Are there any special modifications that are specific to your application?

Besides the size of your room, here are some other items that you should take into consideration:

- ¬ instructor or speaker area
- ¬ wall with boards and/or audiovisual equipment
- ¬ door and window locations
- ¬ anything else which may interfere (columns, steps, ramps, HVAC, etc,)

Define Your Needs

Your table considerations should begin by thinking about the need for the following items:

- ¬ modesty panels
- ¬ linking
- ¬ power and data
- ¬ wire management and grommets
- ¬ keyboard trays
- ¬ fixed, folding or tilt bases
- ¬ special needs (alternate or adjustable height)

Your seating considerations should begin by thinking about the need for the following items:

- ¬ assume a 30" width per person
- ¬ mobility (casters)
- ¬ stacking or storage issues
- ¬ usage and wear (upholstery or wood)
- ¬ adjustable height
- ¬ function (task specific or multiple)

Common Room Layout Guidelines

By using the guidelines below and the information that you supply (from answering the previous questions), Versteel can help you specify the tables and seating you need to make your space function at its maximum potential.

Between Rows Allow Four Feet (4')

If rows are used, four feet (4') between rows is considered adequate in order to provide space for movement.

Instructor Allowance of Eight - Ten Feet (8'-10')

A minimum of eight to ten feet (8' -10') should be allowed for the instructor's space, from the wall to the approach side of the first table row.

Back Wall Allowance of Seven Feet (7')

Space consideration for the back wall is necessary. A minimum of seven feet (7') from the back wall to the user's side of the last table is suggested.

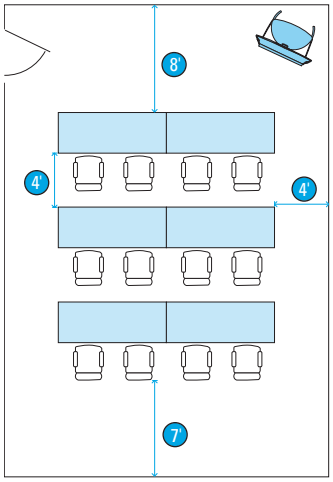

Side Wall Allowance of Four Feet (4')

A minimum of four feet (4') from a side wall to the edge of a table should be incorporated into your configuration. Increase the distance for larger rooms.

Aisle Allowance of Four Feet (4')

If an aisle is needed, allow a minimum of four feet (4'). This dimension should increase with your room size.

The drawing below illustrates the guidelines above.

The following are general guidelines only. Always refer to local codes for restrictions and requirements.

Reference information here originally appeared in Architectural Graphic Standards, published by John Wiley and Sons; and in US Government publications for compliance with the ADA (Americans with Disabilities Act).

Also, be sure to check US Government publications for compliance with the ADA (Americans with Disabilities Act).

Common Seating Dimension Requirements

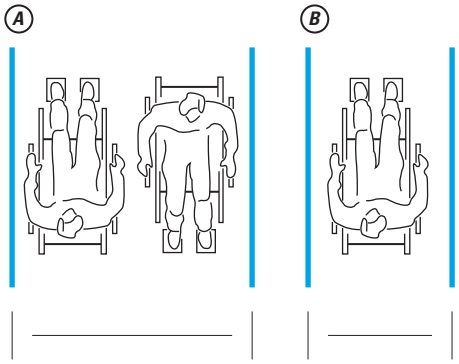

General spacing of thirty inches (30") of lateral space per chair at a table is standard. A minimum of twenty-four inches (24") may work, but will depend upon your chair style and table dimensions. Allow a minimum of thirty to thirty-six inches (30"-36") for wheelchair space at a table.

Most wheelchairs are designed to fit beneath a standard table with a twenty-nine inch (29") table top height. However, some wheelchairs require tables with tops at thirty-two inches (32") in height. Allow an additional twelve to eighteen inches (12"-18") in aisles where wheelchairs may be situated back to back.

A rule of thumb for cafeteria style seating is to allow a minimum of twelve square feet (12 ft^2) for each seat.

Since every space has its own unique size and function, it is important that you consider the aforementioned guidelines when planning your space. Be sure to allow adequate space for aisles and plan your rooms around walls and other permanent fixtures such as doors or windows. Anticipate the type of activity that will be going on and plan enough space at the table for easy movement of personnel when seated.

Don't forget to consider power and data needs also. For help planning and selecting the power and data options that are right for your space, see pages 56-70.

Studio Steel®

Versteel's "urban fabrication" process leaves the telltale signs of welding and assembly on the surface, highlighting a manufacturing aesthetic. Choosing a clear or transparent powder coat is recommended, allowing tonal striations (created as a result of extreme heat), natural textures, and the inherent qualities of raw steel to show through.

Note: Training tables are often used with lightweight computer accessories. For heavy duty applications, such as large scale computer equipment, multiple monitor mounts, etc., Versteel suggests adding a third leg or stretcher. The price of the 84", 90" and 96" models include a stretcher rail required for additional support. Contact customer service if you have specific application concerns or questions.
